LOPAREX

LOPAREX

is a leading, global manufacturer of poly coated and silicone coated papers and films, used in a wide variety of applications.

Robust Product Offering

Loparex is committed to providing our customers with valuable release liner solutions. We offer a wide variety of paper and film substrates, silicone types and curing methods.

Global Footprint

Our facilities are strategically located throughout the world to service global customers on a local basis and maximize efficiency.

Customer Focused

Loparex values customer relationships and we seek to build upon the people and culture aspects that deliver a great customer experience.

Targeted Innovation

We have technology centers located around the world with experienced, professional teams who are available to help guide customers to the best product solution for their application.

Fluoropolymer Release Liners

Silicone PSA's represent one of the most exciting pressure sensitive adhesive applications available because of the many unexplored ways of designing very unique performing products. Loparex can guide your research activity from adhesive formula optimization to liner selection and process development.

Fluoropolymer release liners are based on polyester film coated with fluorosilicone polymers. These liners are specifically designed to meet the needs of demanding silicone PSA applications.

General Characteristics

- Consistent and stable low release level
- Minimizes tack loss
- Good clarity
- Minimizes variability of silicone adhesives vs. acrylics
- Works with a wide variety of specialty pressure sensitive adhesives; including those not compatible with fluorosilicones
